## - Uridium -

Then I take off for a final strafing run as the Dreadnought vaporizes into the ether !

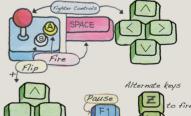

## Manta Fighter Controls

If the Manta Space Fighter changes direction, it will do a full loop. While looping you are immune to enemy bullets. Enemies fly at high altitude and cannot hit your Fighter which flies at ground level. Wood ground obstacles and enemy bullets and reach the last runway on each Dreadnought. Once you get the landing alert, move slowly left to right on the runway to start landing.
